

# Why are Closet Doctor garage cabinets some of the strongest and most secure on the market?

“All Closet Doctor garage cabinets are constructed utilizing a 3/4" melamine back. This back attaches to the sides of the cabinets with a blind dado connection that is glued then fastened with 2" grabber style screws. The top and bottom utilize a blind dado as well to connect to the sides and are screwed together at the top and bottom shelf. The cabinet itself is one of the strongest on the market. We then secure the cabinet to the wall with 6 to 9 screws that are 3 1/2" long, number 14 size and have a washer style head that is over 1/2" in diameter. All of these factors combined gives us one of the strongest and most secure garage cabinet installations in the market. We have been using the same construction and installation method for the last 10 years and have not had an issue with a cabinet. Additionally we offer a lifetime warranty on materials and workmanship, so you can feel secure if there was an issue we would take care of it.”
